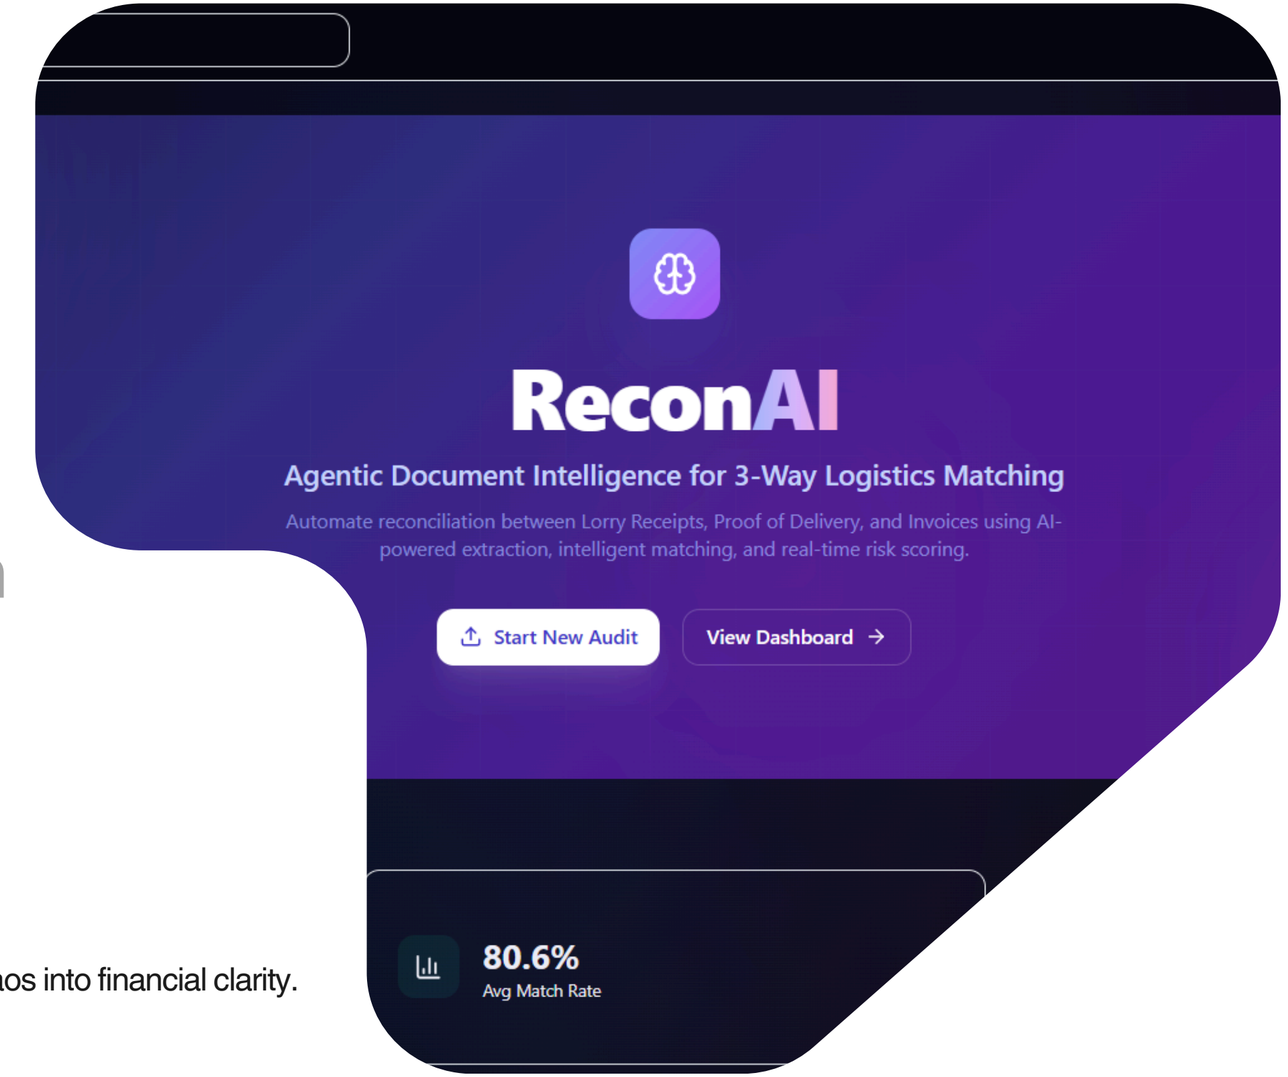
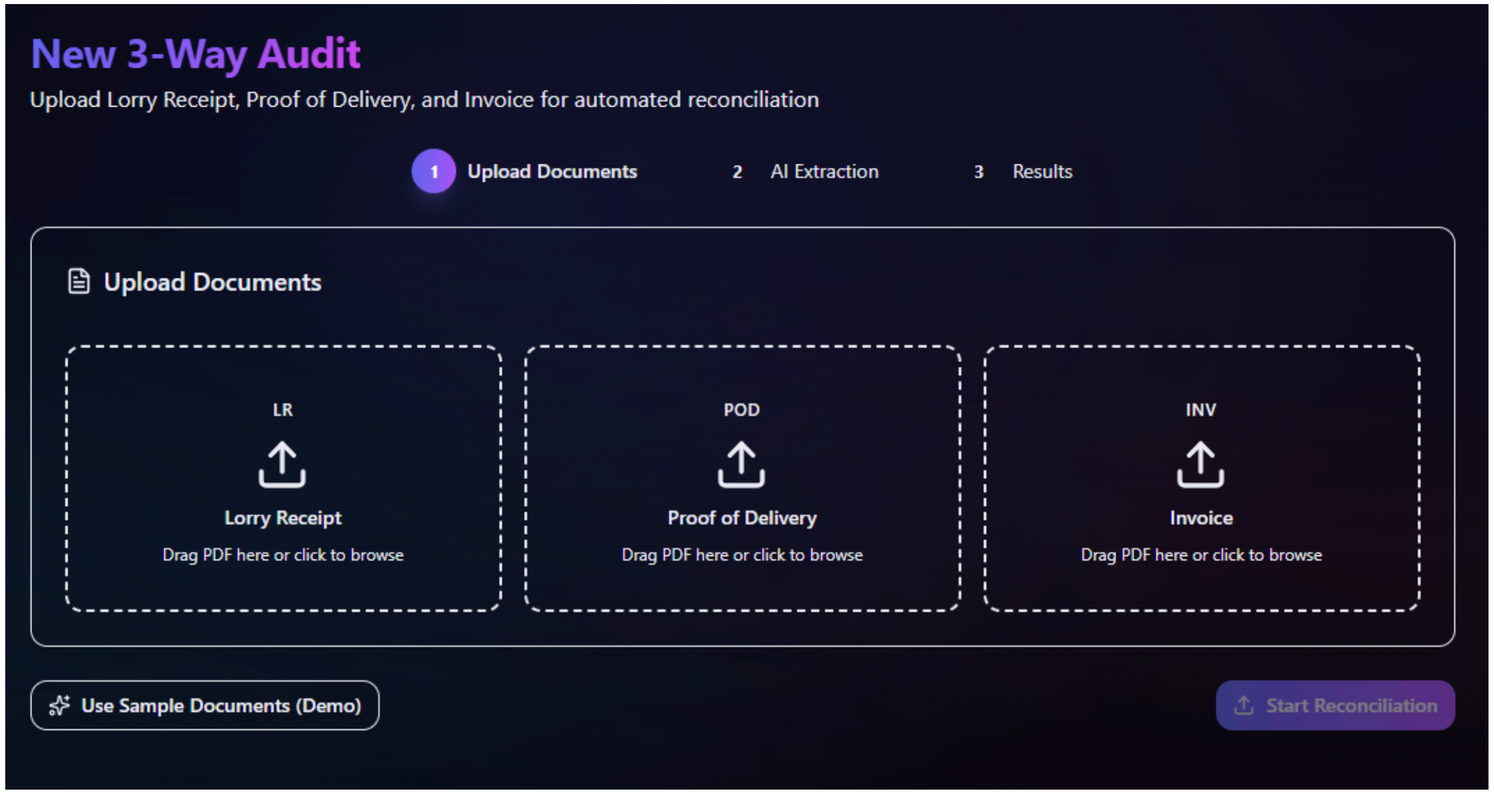
Recon AI

Intelligent Document Reconcilation



Transforming document chaos into financial clarity.
From hours to seconds.



The "Multi-Million Dollar" Problem

Manual Hassle:

Finance teams manually verify thousands of mismatched documents monthly.

Financial Leakage

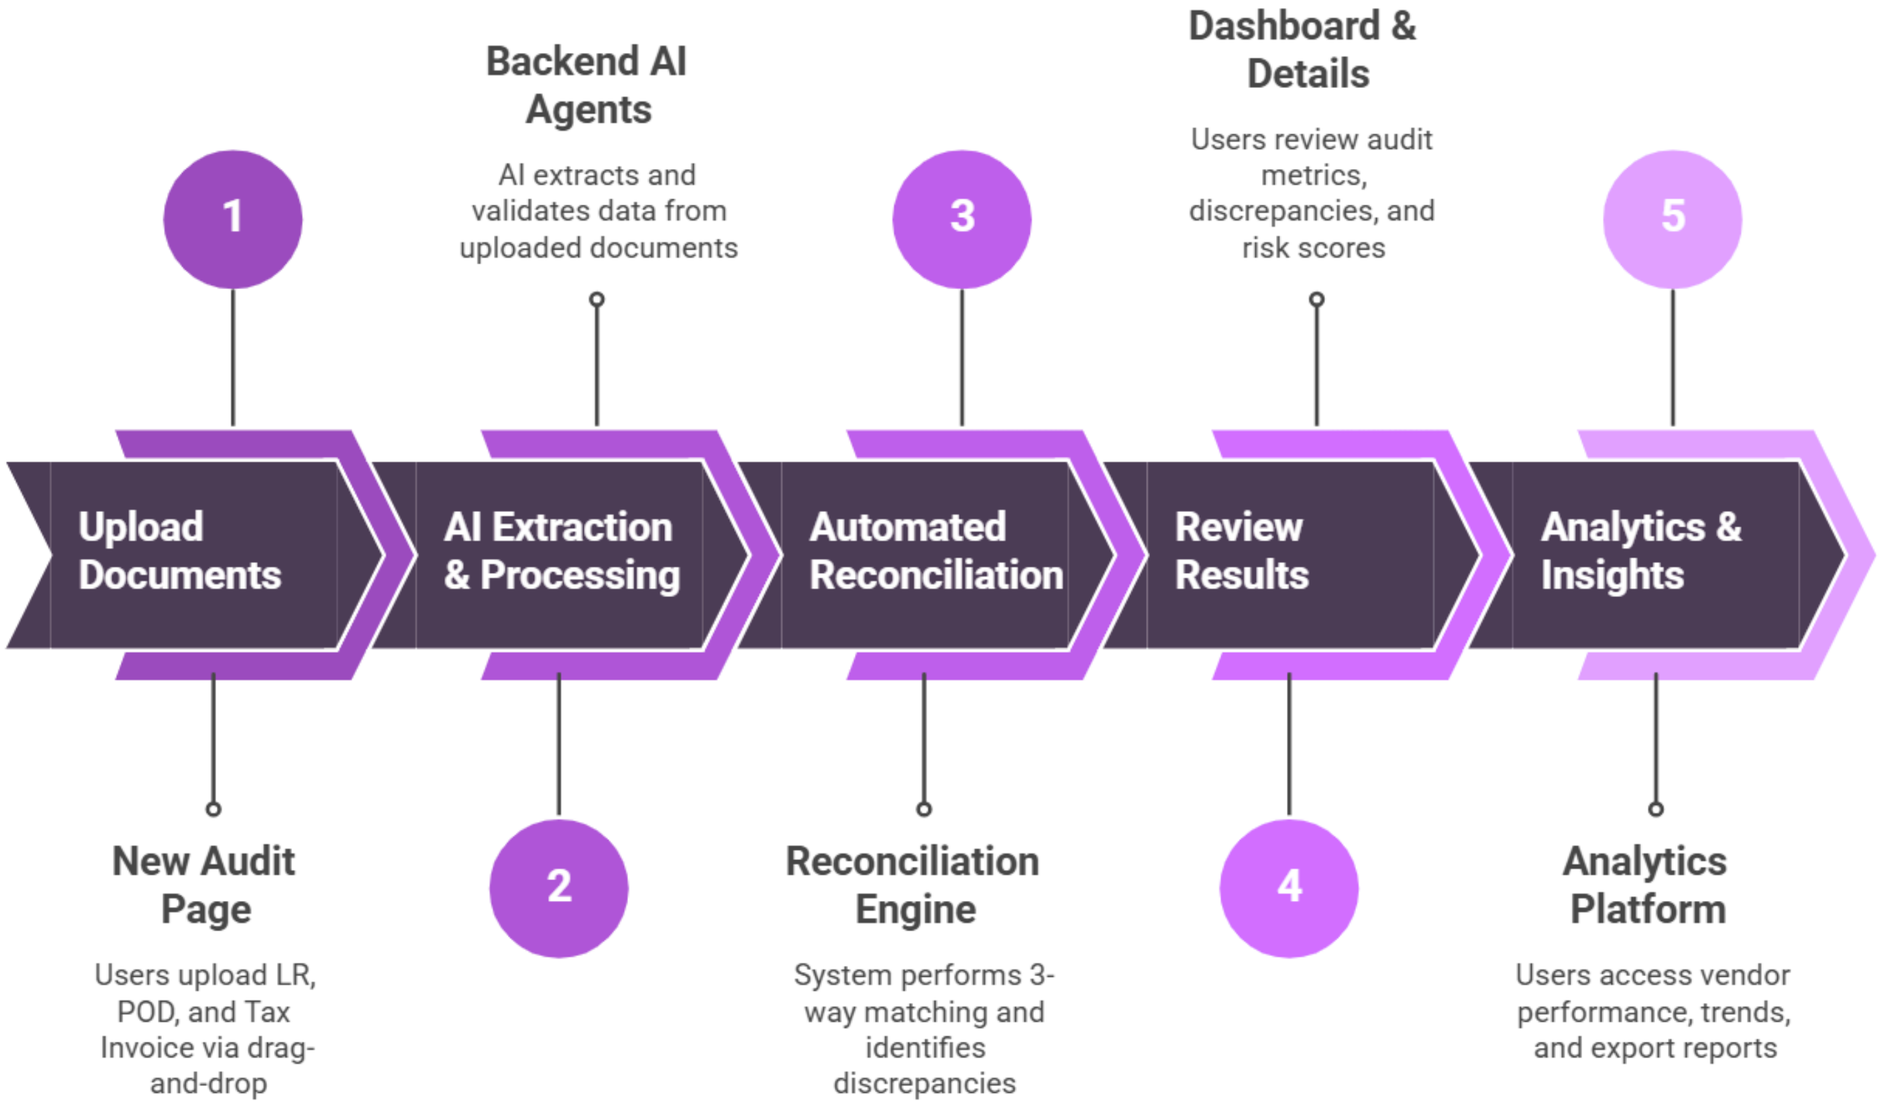
Human error leads to payment bottlenecks and significant revenue loss.

The Scalability Wall:

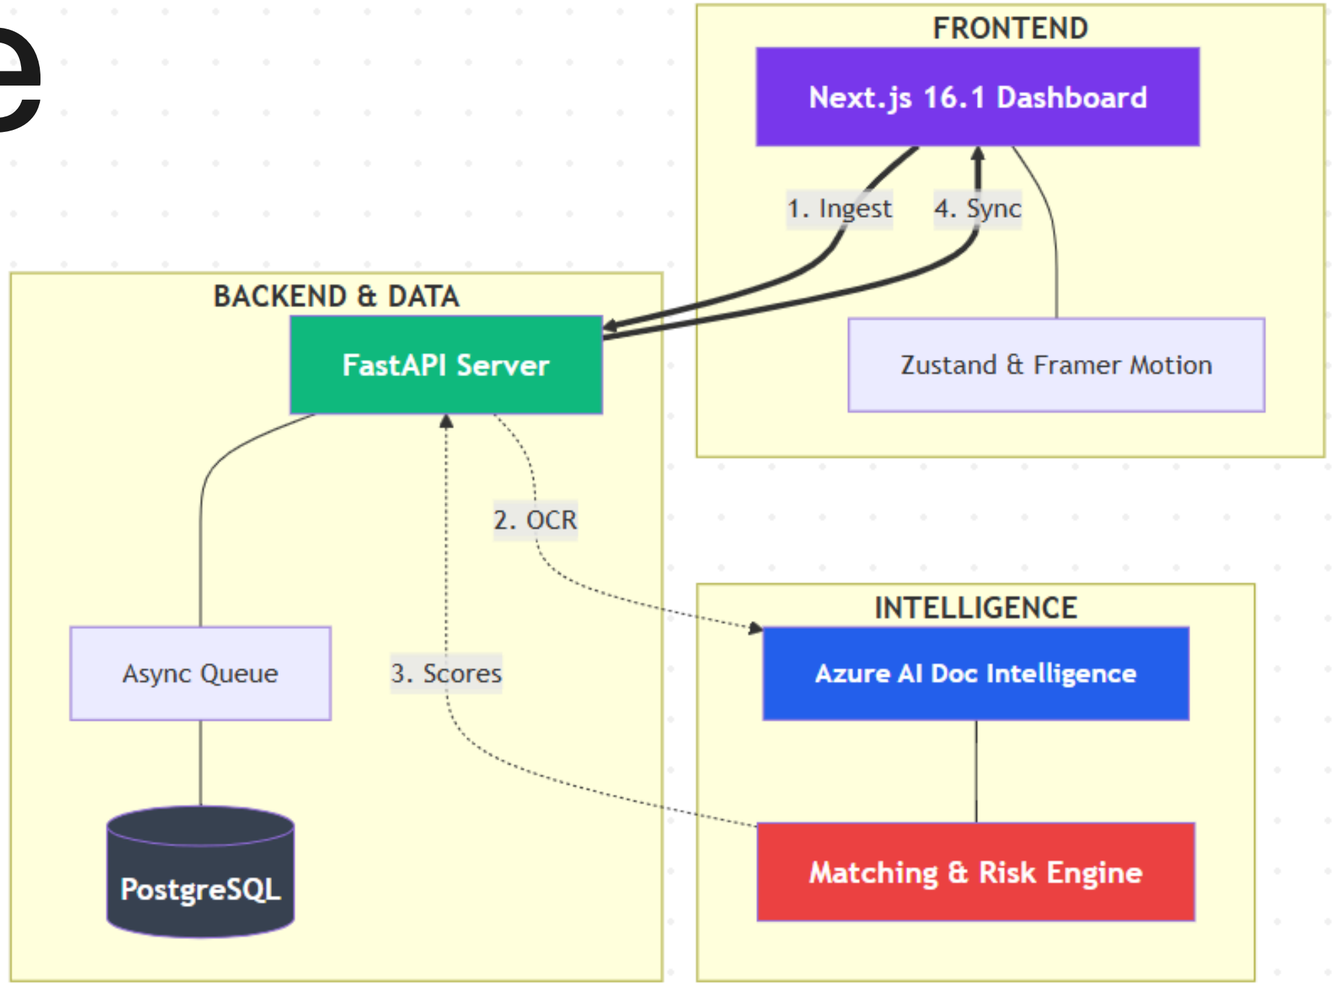
Traditional processes require more headcount to handle more volume.

TEAM CODERIDERS

Automated Audit and Reconcilation User Flow



Architecture Diagram



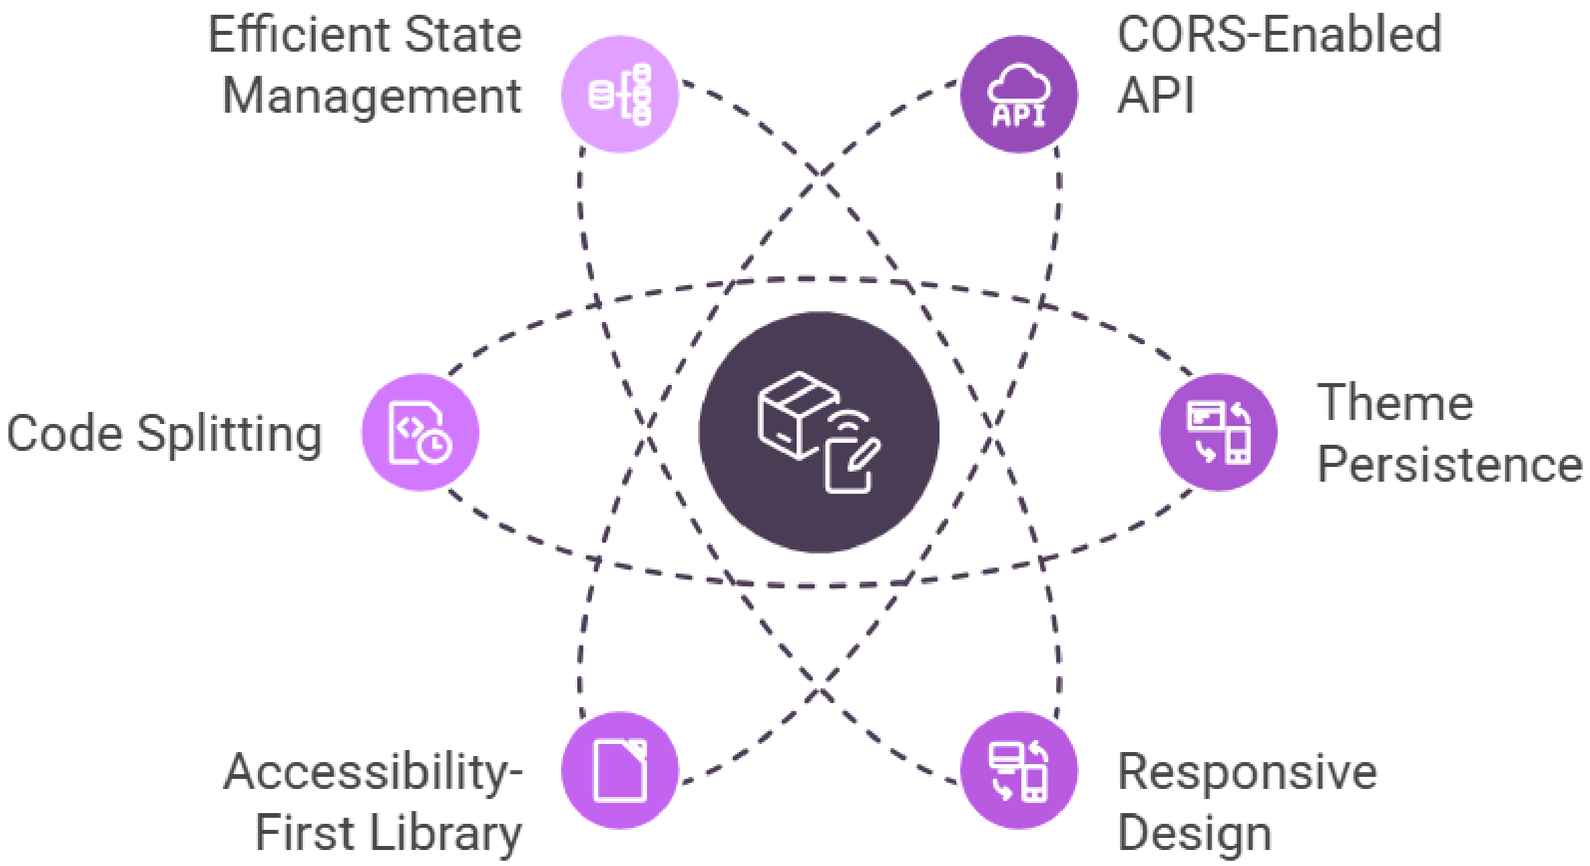
Technical Architecture & Future Roadmap

Component	Technology	Role
UI/UX	**Next.js + shadcn/ui**	Real-time audit dashboard.
API Server	**FastAPI (Python)**	High-concurrency document processing.
Document AI	**Azure AI Document Intelligence**	OCR and structured field extraction.
Risk Scoring	**Custom ML/Heuristics**	Storing historical audit logs and vendor KPIs.
Database	**PostgreSQL**	Storing historical audit logs and vendor KPIs.

Future Roadmap

ReconAI will evolve from a matching tool into a proactive financial ecosystem. Phase 1 focuses on ERP Integration, building direct data pipelines for SAP, Oracle, and Tally to eliminate manual entry. Phase 2 introduces Agentic Resolution, where the AI autonomously communicates with vendors to resolve flagged discrepancies. Finally, Phase 3 implements Predictive Risk Analytics, leveraging historical audit data to identify potential financial leakage and vendor reliability patterns before a shipment even begins.

Key UI Features



Thank You

Transforming logistics document chaos into financial clarity.

One audit at a time.
